

## Covid 19 safety provisions

The protection of our clients and employees is crucial for us. In our work we use disinfectants and protective equipment approved by the authorities on the exterior and interior of vehicles. At the shooting sites the passenger compartments of the vehicles are disinfected with ozone. Parts that are also touched by hand are disinfected with an antibacterial wipe (steering wheel, gear shift, handlers). The procedure is repeated between the scenes. As we better understand the pandemic situation, we will refine this procedure to achieve the best service and efficiency.
